

Whmcs2BillysBilling v1.0.2

Installation guide

- 1) Start by making a backup of all your files and databases.
- 2) Download the files from GitHub or <http://dicm.dk/billysbilling/>
- 3) Upload the files to your WHMCS installation with FTP or your preferred uploading method. The files must be uploaded to this directory:
`/modules/addons/whmcs2billysbilling/` If you do not have the directory `whmcs2billysbilling`, then create it.
- 4) Login as administrator / admin in WHMCS backend
- 5) Goto Setup -> Addon Modules `/admin/configaddonmods.php`

**** NOTES ****

You might get errors just by uploading the files, it is highly important to configure the addon when the files have been uploaded.

- 6) Find the addon "Whmcs to BillysBilling" and activate it. If you get a white page with errors on it, just navigate to the admin url `/admin/configaddonmods.php`
- 7) Now click "configure" next to the "Deactivate" button and configure the addon.
- 8) Login to your account at BillysBilling's website. Find your API key or create one for WHMCS.

```
x000xx0xxx0x00x0xx000000x000000xx000000 )
```

11) Now you just need 4 more fields to setup. Looks at the image below to see a setup.

Default payment account id	Afgifter (varme. el. olie o.l.) (8627006-Rlg7tHPdEmgQ)	Normally 'Bank'
Default revenue account id	Afgifter (varme. el. olie o.l.) (8627006-Rlg7tHPdEmgQ)	Normally 'Sales'
Select salesNoTaxRule	Momsfrit (nmUEqyVaQs42Yuc4D3rzA)	Select salesNoTaxRule
Select default salesTaxRule	Momsfrit (nmUEqyVaQs42Yuc4D3rzA)	Select salesTaxRule
BillysBilling API key	<input type="text"/>	
WHMCS admin username	<input type="text"/> dev	Requires full access
Access Control	Choose the admin role groups to permit access to this module: <input type="checkbox"/> Full Administrator <input type="checkbox"/> Sales Operator <input type="checkbox"/> Support Operator	

If you get payments thru Paypal and do not want them to be sent to your “bank” account in BillysBilling when an invoice is paid, then you will have to setup an account in Billysbilling with the name “whmcs-paypal” in the correct currency you use for paypal. When an invoice get payed with Paypal and you have that account name in BillysBilling, it will place the money correctly in Billysbilling, if there is no account with the name

whmcs-paypal, it will place the money in the default bank account from the config.

**** IN CASE OF ERROR ****

If there is errors while the script run, it will log them in WHMCS under activity log.

**** TESTING THE SETUP ****

Testing is easy, you already got a wokring WHMCS setup and you just need to setup the whmcs to billysbilling part. You have already done this i hope.

I RECOMMEND YOU USE A TRIAL ACCOUNT THE FIRST TESTS.

Testing: Using a clean BillysBilling account (easier)

1) Go to your website and place an order , just like any normal guest would. When you reach the payment page, then take a look in BillysBilling, it should already have saved the invoice (unpaid), your whmcs-id will be set as client and the product will be created in the invoice. Product names is not always 100% accurate, some description can be gone or added.

Now pay the invoice and the status of the invoice in BillysBilling will change too. In case of error, check the whmcs activity log (you can find it here:
</admin/systemactivitylog.php>)
